

User Module

- Functionality:
 - Handles user registration, login authentication, and password recovery.
 - Validates user credentials against database records.
 - On successful login, user is redirected to the dashboard.
- Implementation:
 - User data is captured via JSP forms and sent to the backend controllers.
 - Service layer performs validation and calls repository for database operations.

The Register form is a light gray rectangular box with a blue header bar containing the word "Register" in white. Below the header, there are five input fields: "Username:" (text), "Email:" (text), "Gender:" (dropdown menu with "-- Select Gender --" and a downward arrow), "Password:" (text), and "Confirm Password:" (text). At the bottom of the form is a large blue button with the word "Register" in white. Below the button, there is a link that says "Already have an account? [Login here](#)".

The Login form is a light gray rectangular box with a blue header bar containing the word "Login" in white. Below the header, there are two input fields: "Email:" (text) and "Password:" (text). Below the password field is a large blue button with the word "Login" in white. Below the button is a link that says "Forgot Password?".

Figure : User Module

Dashboard Module

- Functionality:
 - Displays the summary of total products, low stock products, total sales, and today's sales.
 - Provides navigation options to other modules such as Add Product, Create Invoice, and Product List.
- Implementation:
 - Dashboard data is fetched from the database using service methods in the backend.
 - Controller aggregates the required counts and sales amounts and passes them to the dashboard JSP view.

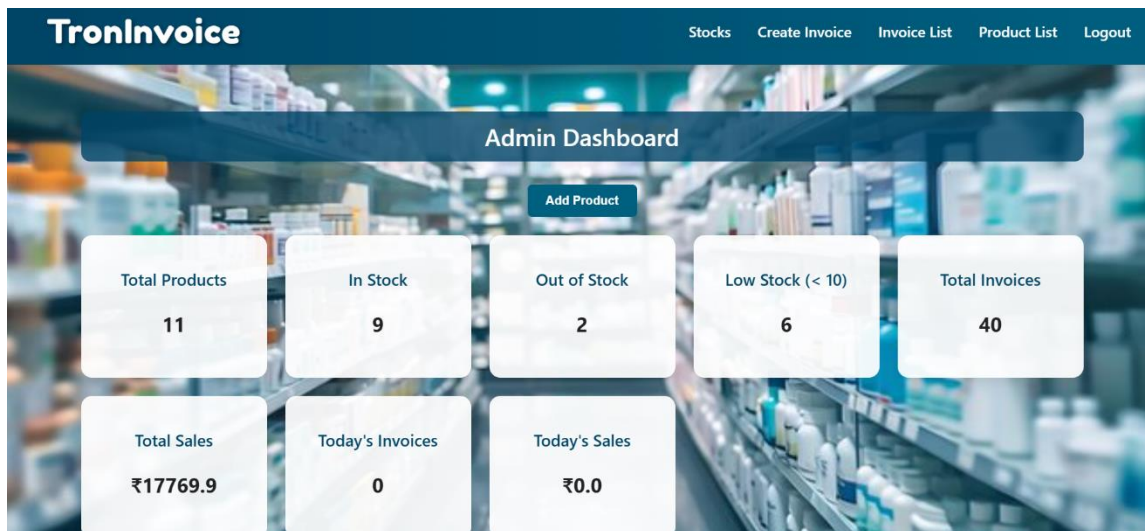

Figure : Dashboard Module

Product Module

- Add Product:
 - User inputs product details including barcode, product name, cost, GST percentage, quantity, and type (In Stock/Out of Stock).
 - System calculates SGST, CGST, total GST, and net total automatically.
 - Product data is saved into the products table.
- Product List:
 - Displays all products in a scrollable table with options to update or delete records.
 - Includes search functionality by product name, barcode, or category.
 - Allows filtering for low stock or in-stock items.
- Implementation:
 - JSP forms capture product details and send to backend controllers.
 - Backend services perform GST calculations and validate inputs before saving via Hibernate.
 - The product list page fetches product data via service calls and displays it using JSTL loops.

Invoice Module

- Functionality:
 - Allows selection of multiple products to add to an invoice.
 - Captures customer details and calculates total GST and net amount.
 - Validates product stock before confirming invoice creation.
 - Provides options to save the invoice or print it as a PDF.
- Implementation:
 - Invoice creation form submits product selections and customer info to the controller.
 - Controller checks stock availability using product service methods.
 - On success, an InvoiceEntity and associated InvoiceItemEntity objects are saved using cascading in Hibernate.

Figure : Invoice Module

Stock Module

- Functionality:
 - Identifies and flags products that are low in stock or completely out of stock.
 - Helps users take timely action for restocking, ensuring smooth inventory management.
 - Displays alerts or highlights in the product list to inform users about low stock items.
- Implementation:
 - Stock quantity is stored in the products table and updated during product addition, invoice generation, or manual update.
 - On the Product List and Dashboard, service methods fetch and compare current quantity with threshold levels to determine stock status.
 - Backend logic in the service layer automatically reduces stock when an invoice is created (based on quantity sold).
 - JSP pages use conditional logic to highlight low stock products and trigger user alerts for action.
 - Optional filters (e.g., "Low Stock", "In Stock", "Out of Stock") allow users to view stock-based product segments.

GST CALCULATION

The system automatically calculates GST components including CGST, SGST, and the total GST based on the selected products and their respective GST rates. This ensures compliance with tax regulations and accurate billing.

The screenshot displays a web interface for GST calculation. It is divided into two main sections: 'Product Details' and 'GST Details'. The 'Product Details' section contains input fields for ProductId (67547), Quantity (100), GST Percentage (10%), Product Name (retinol), and Cost (200). The 'GST Details' section shows calculated values: SGST Amount (1000.00), Total GST (2000.00), CGST Amount (1000.00), and Net Total (22000.00).

Product Details	
ProductId	67547
Quantity	100
GST Percentage	10%
Product Name	retinol
Cost	200

GST Details	
SGST Amount	1000.00
Total GST	2000.00
CGST Amount	1000.00
Net Total	22000.00

Figure :GST Calculation

STOCK UPDATES AND SEARCHING PRODUCTS

After invoice generation, the system updates the stock quantities for the sold products. This real-time stock management helps maintain accurate inventory levels and prevents overselling.

The screenshot shows the 'TronInvoice' application interface. At the top, there is a navigation bar with links to Dashboard, Stocks, Create Invoice, Invoice List, Product List, and Logout. Below the navigation bar, there is a search bar with the text '20205', a dropdown menu for 'Filter by Type', a 'Search' button, and an 'Add Product' button. Below the search bar, there is a table displaying product information.

INVOICE GENERATION

The invoice generation module allows users to create detailed invoices by selecting products and entering customer details. Upon submission, the system processes the input, calculates necessary taxes, and displays the final invoice.
